

PROJECT NOTES

1. Mapping results based on a two-dimensional (2D) unsteady-state hydraulic model simulation using FLO-2D software, Build 17.18.17.
2. Inundation mapping based on 6-hour, 2-year rainfall with no infiltration.
3. Mapping does not include simulation of Mud Flow, mapping assumes a "Mud Flood" condition. Flows include increased runoff due to burn condition.
4. Imagery is "Pre-burn" obtained from City of Malibu.
5. Draft mapping is intended as a worst-case scenario reference within the immediate timeframe after the fire.
   It has been assumed bridges and culverts are blocked.
   It is not meant to represent specific forecasts of individual events. An accuracy/probability cannot be guaranteed, therefore Kasraie Consulting is not liable for mis-use or unforeseeable circumstances.
